

## ALL YOU NEED TO REALIZE YOUR DREAMS

baumbaron specializes in the construction of "skyscrapers". We build comfortable treehouses of creative design and in complete accordance with nature.

### All in one

Sophisticated projects often require the input of structural engineers, in which case we collaborate with experienced partners. Quick decision making paths and seamless communication between everyone involved guarantee an excellent price-performance ratio as well as a strict adherence to our deadlines.

Your advantage: there will be a treehouse specialist at your side for the duration of the entire project.

## A LITTLE CLOSER TO HEAVEN

## ROOM FOR DREAMS

### The treehouse

... is for children a place to retreat, but at the same time an adventure for body, soul and spirit. To be floating between branches and leaves is a delight for the senses - a little closer to heaven.

... is really not any different for adults. The space among the trees is a place of rest and relaxation, an at-home vacation in pure nature and a retreat away from the daily routine on the ground. It is a place for undisturbed work and a feeling of freedom. The treehouse will add another dimension to your life.

### Treehouse-variations

baumbaron knows no real boundaries. Treehouses can be built in a wide variety of sizes. That is why our treetop can be used in many ways: depending on your ideas and imagination for use over the clouds, you can dream of a private library with bar and fireplace, a romantic room, or a proper games room ...

Of course, baumbaron can also magically produce an adventure-playground for kids within the tree. Round or with corners, oval shaped, one- or two-storied, with spiral staircase or hanging ladder - we are open to all ideas and delight in making your dreams come true. Even if there is no tree on your grounds to lean on, we can build your little house in the sky.

### Feel good

A treehouse should never feel like a foreign body in its natural surrounding. This is why we use wood as our primary construction material.

For the exterior we recommend using larch wood or oak. These types of wood might be a bit more expensive, but they are a lot more wind- and weather resistant compared to regular construction boards. With every project, the utmost emphasis is given to your individual ideas and the expectations you have of your green oasis in the woods. Combining these with your natural surroundings, we strive for unity and harmony.

We will be happy to talk with you and visit your location for consultation. Please feel free to call us or send an e-mail anytime.
